

# MEGA White/Yellow Mustard

(Sinapis Alba, nematode resistant)

**MEGA** is a stable variety with very high seed yields.

MEGA has been registered on the EU list since 2003 with the following characteristics:

- x High yield of valuable organic matter
- x Very fast covering
- x Diploid variety
- x Very early until early flowering
- x Intensive, deep-reaching root system
- x Active protection against erosion
- x Mid-high to high in length
- x Resistant to lodging
- x Reduces beet cyst nematodes
- x Nematode resistant

MEGA can be sown until very late in the autumn. It grows very quickly providing good ground cover, making it an excellent green manuring crop.

MEGA is a stable variety with high seed yields. Mega is a nematode resistant variety and very suitable as an intercrop in a sugar-, cereal- and potatoe rotation. MEGA is widely used and recommended in Germany and large quantities are also sold in France and Belgium

**Sowing** : early July until late September

**Seed density** : 15 – 20kg/ha

**Seed depth** : 1 – 2 cm

**Fertilization** : 40 - 60 kg/ha N
