

# TIBOR Timothy

(Phleum pratense)

**TIBOR** is a high yielding timothy variety with a good persistence.

Key features:

- x Very high dry matter yields
- x Early-mid flowering
- x Very good persistence
- x Good resistance to leaf spots
- x Good spring development

TIBOR is an ILVO hexaploid variety of which Westyard has all exclusive rights. It is recommended on the Belgian list with the highest dry matter yield compared to the other varieties.

Furthermore TIBOR has very high ratings for persistence and for resistance to leaf diseases.

TIBOR has been tested in Denmark and showed the best results in green- and dry matter yield.

**Sowing** : until early September

**Seed density** : 15 – 20kg/ha

**Seed depth** : 1 – 2 cm

**Sowing distance** : 15 – 20cm
