

VEGA Phacelia

VEGA is a fast growing green manuring variety and is also suitable for set aside forage.

VEGA is registered on the EU list and shows the following characteristics:

- x Fast growing variety
- x Very popular catch crop
- x Not sensitive to drought
- x Early-mid flowering
- x Not resistant to frost
- x Intensive, deep-reaching root system
- x Fine and soft leaves

VEGA spreads very quickly across the ground and restricts the growth of weeds. It has a fast start in the growing process and is not resistant to frost.

VEGA produces a mass of sweet smelling purple flowers providing a good source of nectar and seeds beneficial to a large variety of insects.

VEGA has an extensive root system with a large portion of fine roots and is therefore able to reach nutrients in deep soil layers.

Sowing : April until early September

Seed density : 8 - 12kg/ha

Seed depth : 2 cm

Fertilisation : 40 - 60kg/ha N
